Broadband for Business

Nypanet.com is proud to announce

In addition to standard business telephone capabilities and disaster recovery options, nypanet.com also offers business class broadband to selective clients in the Stroudsburg, East Stroudsburg area. If you have ever longed for a faster solution with up to T-1 speeds for an affordable price, than this might be the system for you.

Quality of service (Speed) can be controlled on a per user basis, Moves and changes are easily managed, and your current network configuration doesn't have to change.

Speedy service to your door.... And More!

Nypanet.com is not just your average internet provider. We also offer Disaster Recovery and VoIP (Voice over IP) services as a package if that is what you are looking for. Future system enhancements complying to the standard can be incorporated almost effortlessly.

We are everywhere, and growing!

Nypanet.com is a WISP. A WISP is a Wireless Internet Service Provider with a network built around wireless networking. Not the kind of wireless found in your Cell Phone, but one designed and built for your PC at work and it runs at broadband speeds. The technology used ranges from commonplace Wi-Fi mesh networking or proprietary equipment designed to operate over open 900MHz, 2.4GHz, 4.9, 5.2, 5.4, and 5.8GHz bands or licensed frequencies in the UHF or MMDS bands.

How it works

Using our antenna system and a triangulation of power points of access we can wirelessly "cable" up other buildings back to our main point and only require one link from the Telco to connect up hundreds of businesses at the same time. In turn each "satellite" building can be wired up with Ethernet so each business connected into the Ethernet LAN and could instantly get Internet access.

Why use us?

There are some great reasons to use us. We are not the telephone company, or the cable company. We are worried about one thing and one thing only: Your business continuity. Reliability is a great reason, we do not depend on poles to get our system to you, therefore with a UPS or a generator, you can still have connectivity in the most desperate of situations. We can also give you more speed than cable or DSL. Speeds up to T-1 are quite possible with our system, on either a permanent or temporary basis.

But I need off-site backup

No problem! Nypanet.com also offers Disaster recovery and off-site storage or your data, and if it is over our superfast wireless network, it can happen live!

Communications services are also available to allow you to outsource your telephony needs in the same way that you might outsource your

payroll or internet services. Capital expenditures are dramatically reduced, since you no longer need to buy, manage and maintain an on-site phone system. Or a back up server.

Location Location Location

By virtue of our design nypanet.com can also offer you VPN or virtual

private networking. That extends your network from your office to your outlying offices and homes if need be. Your network can grow when you are with nypanet.com and our partners.

Redundancy Means Two

A lot of companies today are concerned with what would happen if they suffered a loss of internet services. Subscribe to our service, and our system offers you a backup internet provider in case your normal one is not functioning. The switch will be transparent to you

and your people will keep on working!

Cost Of Ownership vs Business Continuity

It is hard to place a value on your data. The range goes from worthless to priceless, and every businessman needs to decide how to make his business continue after a disaster, and what that is worth to him. One of the most critical aspects of business continuity planning is: "How do I keep my employees communicating with my customers?"

Nypanet.com easily addresses this element of business continuity planning:

Business continuity is achieved by careful planning, investing in a portable communications / data solution, digitizing your files, and redundancy of services.

With the large volume of web traffic for email and business applications, with graphics, videos, and PDF files, you MUST have Broadband Internet access for your business.
